

Annex to
The Institutional Determinants of Labour Market Performance'

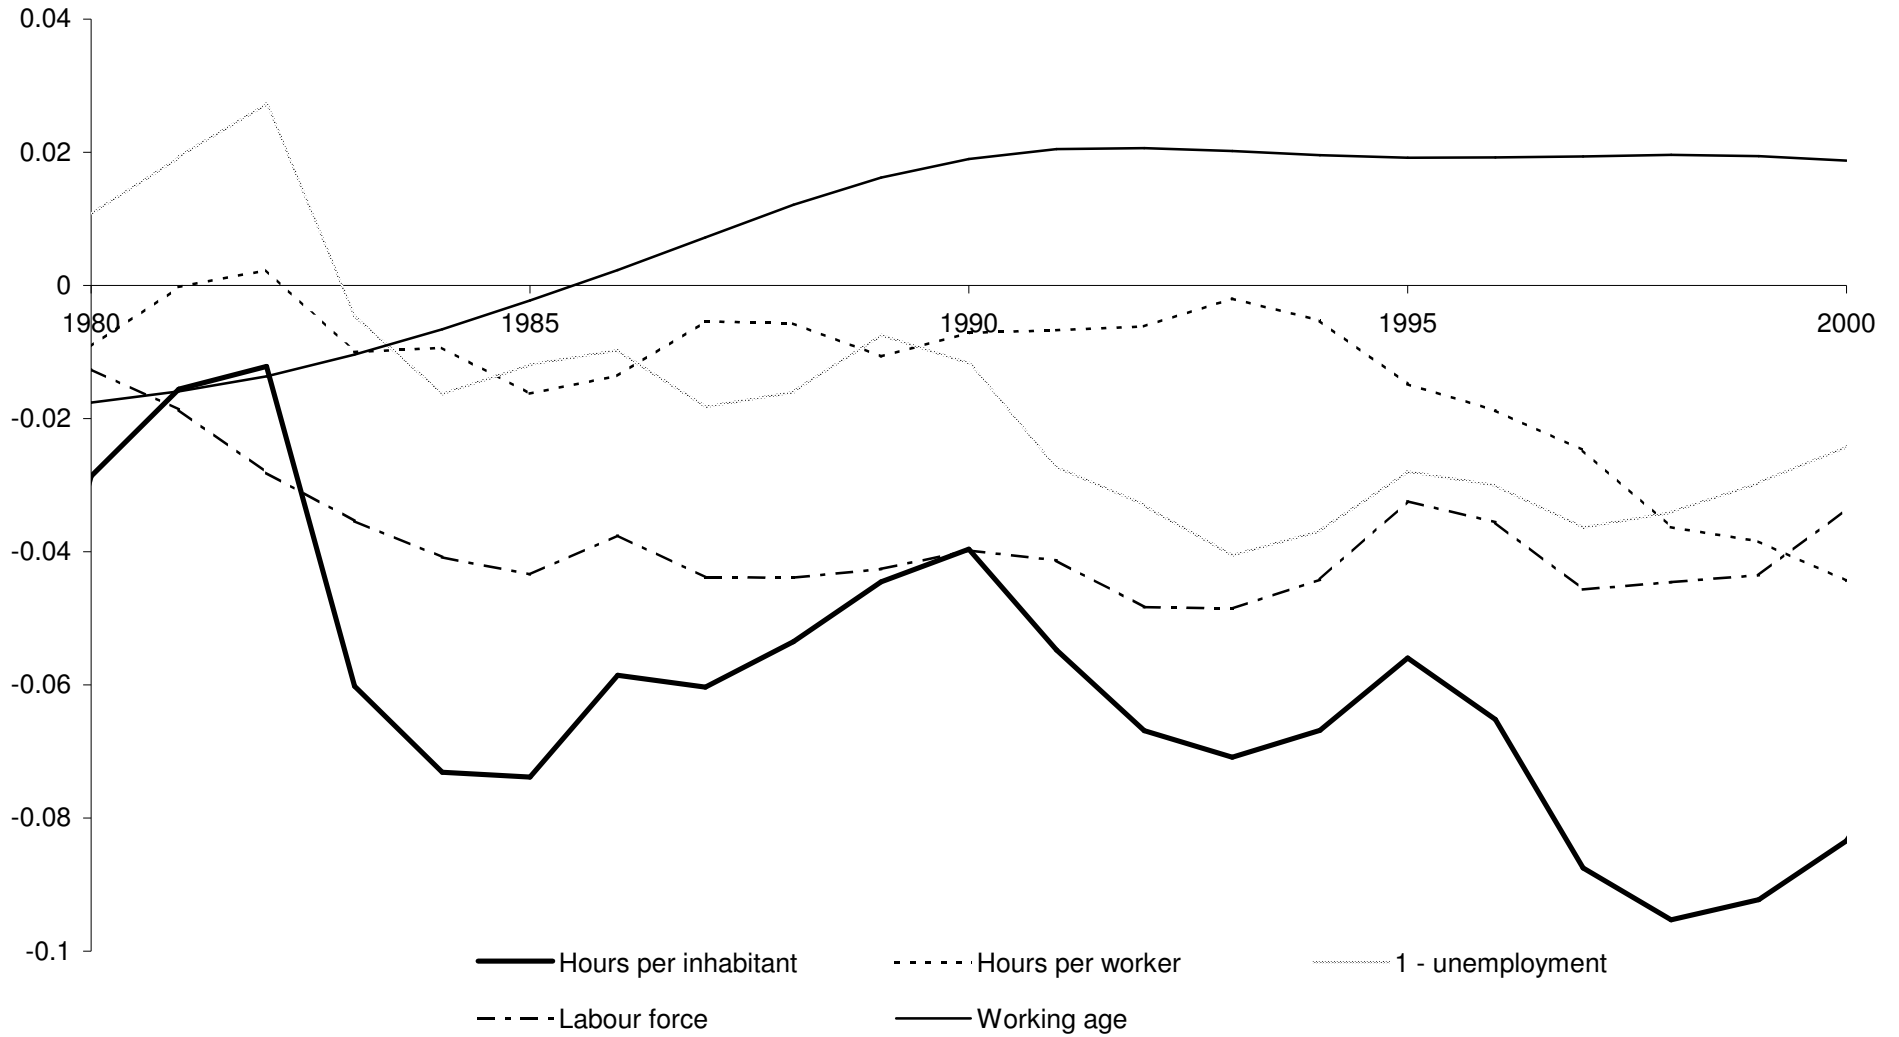

by Henri L.F. de Groot, Richard Nahuis and Paul Tang

Decompositions of hours per inhabitant into hours per worker, workers as fraction of labour force (1 minus the unemployment rate), labour force as fraction of working age population and working age population as fraction of total population (all relative to US).

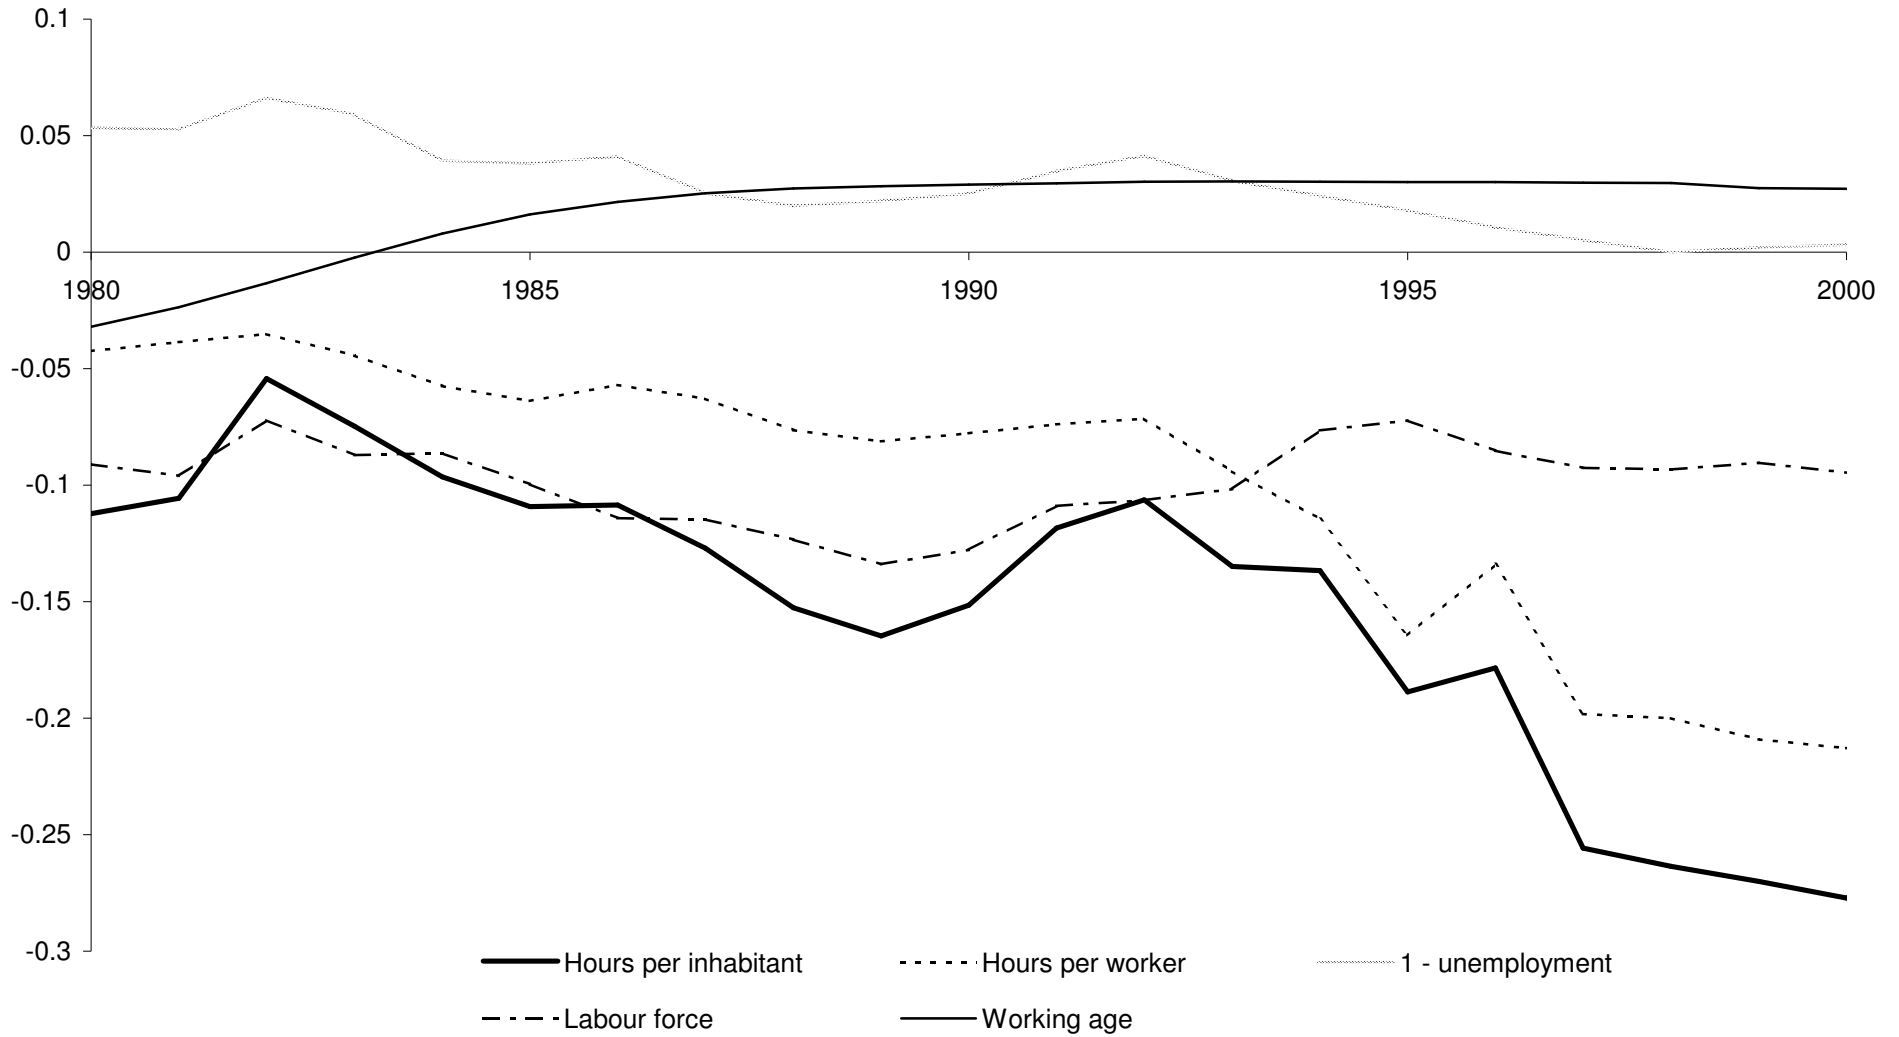

Source: own computations based on information in GGDC: Total Economy Database 2004 (University of Groningen and the Conference Board); standardized unemployment from OECD, Nunziata et al. and Golden and Wallerstein and age composition from UN. See paper for details
