

Supplement to:  
The Crisis Sensitivity of European Countries and Regions:  
Stylized Facts and Spatial Heterogeneity

Stefan P.T. Groot, Jan Möhlmann, Harry Garretsen and Henri L.F. de Groot

Forthcoming in Cambridge Journal of Regions and Society (2011)

This supplement contains some additional material describing the relationships between on the one hand unemployment on the other hand, respectively, (i) government support to the financial sector, (ii) the current account balance, (iii) the change in labour costs, (iv) the pre-crisis government debt, (v) trade union membership, and (vi) financial integration. They complement Figures 5-10 in the paper.

- (i) *Relationship between an index for government support for the financial sector and the change of unemployment*

(ii) Relationship between the current account balance and the change of unemployment

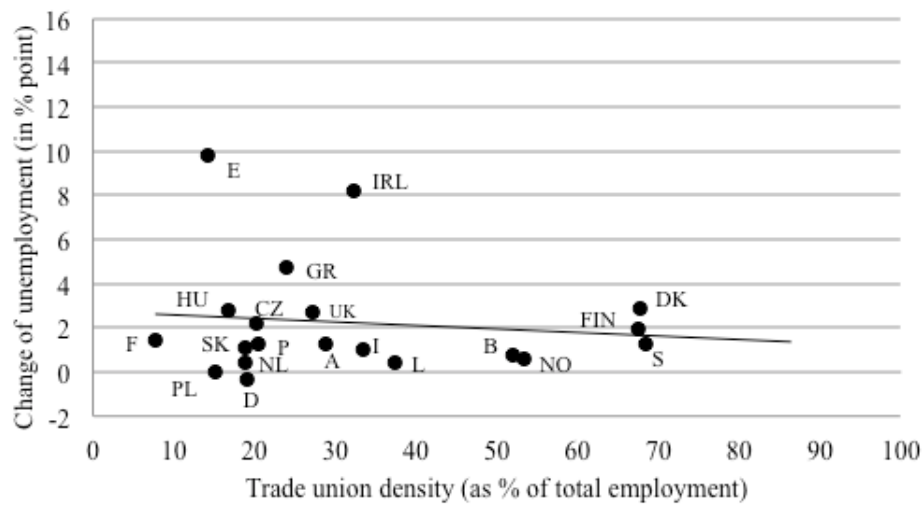

(iii) Relationship between change in labour costs and the change of unemployment

(iv) Relationship between the pre-crisis government debt and the change of unemployment

(v) Relationship between trade union membership and the change of unemployment

(vi) Relationship between financial integration and the change of unemployment
